DETAILED ACTION

Claim Objections

1. Claim 2 is objected to because of the following informalities: The phrase “adjusting the maximum position” is a separate method step. It should appear on its own line, and the first method step, ending with “first position”, should end with a semicolon. Also, the step might be clearer if it were worded “adjusting to the maximum position.” Furthermore, nouns such as “a nosepiece or a slide” added after “starting” and “adjusting” would be helpful. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation "the maximum position" in line 5. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2873

5. Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by Kojima and Nagano (English abstract of JP 04-093908, reference AR in applicants' IDS, received by PCT/PTO 15 FEB 2002). Kojima et al. disclose a method for detecting the maximum quantity of possible positions of an exchangeable nosepiece (revolver) or slide in a microscope system (English abstract; although their stated purpose is different, their method has the steps claimed in claim 2 and can therefore be used for the same purpose) comprising the steps of:

starting from an initial position which corresponds to a first position (lines 1-2 of "Constitution"; by applicants' admission on page 3, lines 2-3, a nosepiece is mounted in an initial position according to mounting instructions; also, any nosepiece inherently has at least one position, which can be labeled initial or first);

adjusting the maximum position (line 4 of "Constitution": "switch the objective lens" and lines 7-8 of "Constitution" in the submitted abstract: the revolver switches N objective lenses and therefore must at some point reach the maximum position);

comparing this maximum position to a position registered in a memory (line 5 of "Constitution" in the submitted abstract); and

storing the result of the comparison (line 6 of "Constitution" in the submitted abstract).
